

## Blogging the Corrosion within New York States New Green Budget

February 16, 2020,

With only ten weeks to come up with a fifty-year budget plan the legislatures must be pulling their hair out. One deal to drive the state of the economy for the next fifty years. one must ask who is running the show. The Governor of course and on the 8<sup>th</sup> of January 2020 Andrew Cuomo Governor of New York addressed the state of the of State as a ship sailing at sea. The course is destined by his progressive movement.

Fifty years is a lot to plan for and while driving around the "Queen City" Buffalo, New York the locals know why it's really called "Nickle City," Canada. In 2001 the United States was attacked by Saudi's and they been steering the economy now since the 1970's they also been allied to the Common Wealth since the early 1900's. Slowly the desert state and common wealth abused the Petro-Dollar system buying off political "dhimmis," puppets using the people of the United States to wage conquest after conquest against the Middle East and around the world, "*Sharia Law and Order*" is the scheme of the Wahabis and the American people are now realizing the effects after Brexit.

Governor Cuomo has huge plans to revitalize the Erie Canal, transportation system, and to bring more fun and excitement to the area. Modernization of closed transportation systems; just in 2019 he announced a contest for the best ideas driving more tourism into the Canal area. He also mentioned investments in Airports to bring more commerce to the State.

Since the Industrial Revolution commerce of the Erie canal had dwindled to a dead stop. Black gold came and accelerated development of cities and communities. With the growth new ideas exploded into inventions like railways, cars, and airplanes to explore and build faster on a connected credit system everyone trusted. Automobiles and aerospace travel perfected, but so was fraud and abuse.

Wars erupted throughout the world; Europe was in turmoil pulling American's into the mix. The United States was artistic, technologically intuitive and peaceful. Once peace is achieved though one can easily become complacent and complacency kills.

Infantryman and maintenance inspector have important thing to consider, one is corrosion and the costs it will endure through time. Sure, a car looks beautiful when its manufactured, but after five years your doomed to have issues, especially when you're always on vacation. Likewise, the buildings that have been build years ago are collapsing in parts of Buffalo, New York. According to the Government Accountability Office in Washington D.C. it was found a whopping forty percent of collected taxes must be allocated to address corrosion and maintenance.

To have a green deal one would think to have the buildings maintained for long lasting care; we're talking the next fifty year. Throughout the 1900's the United States had succumbed to multiple monetary changes. World War One and Two nearly collapsed the economy, but the war brought European Gold to Fort Knox. If the United States holds so much gold, but no inspections of it since the 1950's can we honestly tell ourselves everything is okay? Are there major changes coming to our shores that's felt overseas? What happens when the monetary policy changes and the United States no longer has a credit system tied to Sharia Law?

As an American, a Combat Veteran, Battle Staff Operation Non-Commissioned Officer and a program manager for search and rescue missions one thing should be on everybody's mind. Do we have the resources, the equipment and the people to carry out the mission? If your equipment is faulty then nothing will get done, then you have people that can't read maps that are dependent to mobile devices and gasoline. In just one day everything could be turned off, that is the cost of maintenance.
